Burpee's Spring Flowering Bulbs for Planting in the Fall

FOR generations, tulips have been associated with Holland and Holland with tulips and rightly so, for nowhere else in all the world do tulips produce such high-quality bulbs. This is also true of hyacinths, daffodils, crocus and the many other lovely flowers offered in this catalog.

Our testing and experimental grounds at Fordhook Farms were ablaze with color this spring. We not only had plantings of all the varieties of bulbs we cataloged last year, but hundreds of others from which to select the very best and most distinctly different kinds for you to enjoy in your gardens and homes.

This little book offers a wide and select assortment of recently introduced varieties, as well as the cream of the older favorites. Each has real merit and is adaptable for growing under American conditions. Quality is of the highest. Satisfaction is guaranteed under our Money Back Guarantee. All are easy to grow if you follow the simple directions printed on the bags containing the bulbs.

Early fall is a good time to sow lawn grass, perennial flower, pansy, English daisy and forget-me-not seeds. It is also a desirable time to plant asparagus, horseradish and rhubarb roots. We have included these items and solicit your orders for them and the bulbs you wish to plant this autumn. All orders will be appreciated and will receive our best attention.

TIME OF DELIVERY Bulbs ordered before they are ready to send out will be booked for delivery and orders filled, in rotation as received, as quickly as possible after the bulbs reach us from our growers. *All Bulbs*, with just a few exceptions, are ready for delivery after the middle of September and all hardy varieties can be planted outdoors any time from then on until the ground freezes hard. Daffodils will do better if planted before the ground freezes.

FREE DELIVERY Everything offered in this catalog will be delivered prepaid anywhere in the U. S. except large quantities of Mushroom Spawn, Asparagus, Horse-Radish and Rhubarb roots, listed "not prepaid."

Giant Flowered HYACINTHS

The Finest for Beds, Borders and for Growing Indoors

Among the many flowers that can be grown from fall-planted bulbs the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more decorative or attractive than a display of hyacinths in the house during the winter or early spring! Equally effective and beautiful are beds, borders or groups here and there among perennials or in the front of shrubbery. One of the easiest flowers to grow anywhere and one of the most beautiful.

How to Grow HYACINTHS

Outdoors: Plant mammoth bulbs 6 to 7 in. deep and 8 in. apart; medium size bulbs, 6 in. deep and 6 in. apart.

Indoors: One bulb is usually planted in a 5- or 6-inch pot, depending on the size of the bulb, although several bulbs may be planted in a 6-inch or larger size pan. Use only the mammoth size bulbs for growing in water in the house.

Full cultural directions for outdoor and indoor growing are given on every bag containing the bulbs.

Single Early TULIPS

How to Grow TULIPS

Outdoors: Tulips should not be planted in soil in which they had been grown the last two seasons. Select a new location in a sunny position. Do not use fresh manure at planting time; well-rotted manure or bone meal may be worked into the soil which should be well drained. Plant bulbs 5 to 6 in. deep and 6 to 8 in. apart.

Indoors: A mixture of $\frac{2}{3}$ good clean garden soil and $\frac{1}{3}$ leaf mold to which a little bone meal has been added will give the best results. A 6-inch pot will hold about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil, and water thoroughly; then put pots in a coldframe or heel-in in the garden for 8 to 10 weeks to force root development. Bring pots indoors, first in a cool location and gradually to the average living room temperature.

Complete cultural directions for the growing of bulbs for winter and spring blooming are given on every package.

Double Early TULIPS

The blooms have good lasting qualities and are nice for cutting. Easily grown in pots for indoor winter blooming. They make a compact, stocky growth 10 to 12 in. high.

The chief characteristics of Darwin Tulips are the perfect cup-shaped flowers, fleshy petals, tall stems, and lovely colors—scarlet, crimson, rose, pink, violet, purple, slaty blue, blue-violet, lavender, white and golden yellow. They are wonderful for planting in masses in beds, borders or in groups of 12 or more here and there among the hardy perennials, and what could be lovelier for cutting?

For a full range of colors in late tulips, the Giant Darwin, Ideal Darwin, Lily Flowered, Breeder and Cottage varieties should be included in your plantings, as each class has its own range of colors, and all bloom at approximately the same time. The height given for each variety is average, and some variation is natural in different localities and seasons.

Cottage TULIPS

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May after the Giant Triumphs have passed, hence the name, "May Flowering." The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to a great extent in other late tulips.

Cottage Tulips are as varied in their range of colorings as the Darwins but different in form, being mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 14. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden decoration. Planting directions are on every bag containing the bulbs.

Might be called "Early Darwins" because of shape and blooming time.

The Attractive Chameleon TULIPS

In shape and habit of growth, these resemble the Darwins, but the colorings remind you of the Cottage Tulips. When first opening, the flowers are white with faint red or pink markings on edges of petals. As flowers age the pink or red suffuses over entire surface so that the colorings change from day to day, hence the appropriate name "Chameleon." They flower in May.

9334 Peasant Maid White flushed rose-pink on opening, changing to a lovely rose-red when fully matured. White base with blue cross and brown anthers. Pleasing color combination. Flowers are large; stems strong. 23 in.

Rembrandt TULIPS

9333 Mixed Colors The unique flowers of Rembrandt Tulips resemble those of the Darwins, but instead of being of solid colors, they are beautifully striped, feathered or flaked in two or more colors. They bloom in May, grow 18 to 22 in. high, and are sometimes referred to as "Striped Darwins." We offer a splendid mixture of many varieties of this artistic and striking class.

Chinese Lantern TULIP

9336 Good Gracious This tulip is so distinct that instead of listing it with the Cottage or May-flowering group we are offering it separately so it will not be overlooked. Flowers are of good size, globular and glow with such an iridescent sheen as to create the effect of a delicately colored, lighted Chinese Lantern. The color is rather difficult to describe: a glorious combination of pink, salmon, orange and yellow gives the general effect of brilliant orange; inside is a brighter orange with a contrasting yellow base.

Extra Early Species TULIPS

The Botanical and wild Tulip species are mostly natives of Asia Minor and Central Asia and are quite different in habit, requirements and uses from all other tulips. Their popularity is increasing each year as they surely have a grace and charm that endear them to everyone. Plant in a sunny location and well-drained soil. They deserve a place in every rock garden and hardy border. All are early blooming—some in April, others in early May.

Burpee's Hardy Garden LILIES

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarf ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, plant the Easter Lilies offered on page 30.

Regal or Royal Lily

Narcissus or Daffodils

In a general way, daffodil and narcissus mean the same thing; daffodil is the common name and narcissus the botanical name. Common usage among garden makers in this country has applied the term daffodil to the Giant Trumpet varieties, while the smaller or medium trumpet, as well as the Cluster-flowered and Poet's types, are referred to as narcissus. Botanically, these smaller or medium trumpet daffodils are the Barri, Incomparabilis, Leedsi, Poeticus, Poetaz, Polyanthus and Miniature types. To avoid confusion, we are listing all of these classes as daffodils.

Some gardeners apply the name jonquil to the Giant Trumpet Daffodils, but this is misleading, as the true jonquils and campernelles are small flowered and sweet scented; showy when massed in beds, borders or naturalized. Their delicious fragrance makes them indispensable for cutting.

As daffodils bloom early, last a long time, and may be had in so many lovely varied forms, they have few equals as garden flowers. They are most desirable for any garden purpose—in masses, in beds or borders, in groups of 12 or more here and there in the hardy perennial border, or in the foreground of shrubbery. For naturalizing in large quantities, no other flower is more suitable. Ideal, easily grown subjects for winter blooming in the house, especially the "Paper White and Soleil d'Or Narcissus." Short cultural directions for the growing of daffodils indoors and outdoors are given on the opposite page; full directions are printed on every bag containing the bulbs.

How to Grow DAFFODILS

Outdoors: For best results plant bulbs as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, after the ground is frozen hard, cover with leaves, straw or coarse litter to a depth of 4 to 6 in.

Indoors: Put several bulbs, about 1 in. apart (same variety), in a pot, barely cover the bulbs with soil, water thoroughly, and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing indoors for winter blooming. Full cultural directions on bags containing bulbs.

Medium Trumpet DAFFODILS

On this and the next page we offer a choice assortment of daffodils whose trumpets are not so long as the perianth segments. In this group, where the trumpet is greatly reduced in size and cupped, we refer to it as a "cup"; where trumpet is shortened but expanded or broadened, we call it a "crown" and where very small and flattened, an "eye."

The Medium Trumpet class is divided into three groups—Incomparabilis, Leedsi and Barri. These divisions are based mainly on the relation of the perianth to the trumpet; crown or cup; an explanation is given under each group as to its distinguishing characteristics. Never before have we been able to present a better assortment of varieties than now.

Polyanthus NARCISSUS

Popular for growing in the house during the winter and early spring, either in soil or in pebbles and water.

One of the easiest flowers to grow. Best results are obtained if your first plantings are not made until after October 15. To have a continuous display, make successive plantings two or three weeks apart. We suggest you order enough bulbs early, as they will keep in perfect condition if put in a cool, dry place until needed for planting.

Water Culture: Put an inch or two of sand or pebbles in bottom of dish; set the bulbs upright and place sufficient pebbles around them to hold them in place. Fill dish with water and set in a dark, cool room until plenty of roots have formed, after which bring to a light but cool, free from frost, place. Polyanthus Narcissus may also be grown in soil. **They are not suited to garden planting** except in frostless localities.

9460 Paper White Grandiflora—The Fragrant White Narcissus

The large, pure white blooms are borne in clusters and are highly prized for their beauty, fragrance, and the ease with which they can be grown in the house. This accounts for their universal popularity. **EXTRA LARGE BULBS:** 12 for 85¢; 100 for \$6.00

9459 Soleil d'Or—Golden Yellow Narcissus

Often called the "Yellow Paper White," the sweet-scented blooms being rich golden yellow with a deep orange-red cup. May be grown, like Paper Whites, in water and pebbles, but do best when grown in soil. Full cultural directions are given on the bag containing the bulbs. **LARGE BULBS:** 3 for 70¢; 12 for \$2.50; 100 for \$18.00

Spring Flowering CROCUS

Outdoors: Crocus will grow in many places—in the lawn, flower borders, rock gardens, edge of shrubs, on the slopes of terraces, in sun or shade, and even under trees. For showy effect, plant bulbs 3 to 4 in. apart, 2 in. deep. To avoid formal arrangements when planting in the lawn, scatter the bulbs and plant them where they fall. In borders, double rows 6 in. apart with the bulbs spaced 3 in. apart in each row are very showy; such ribbon arrangements are most striking. Do not plant in heavy, wet soil.

Indoors: Plant 8 to 10 bulbs 1 in. deep, 2 in. apart, in a 6-in. container using light sandy soil to which bone meal has been added; water well and set in a cool cellar for about 6 weeks so that bulbs will become well rooted. When top growth has begun, bring them to the light. Keep in a cool location.

RANUNCULUS

8977 Tecolote Giants The largest and most magnificent strain ever offered. Giant double and semi-double flowers, 3 in. and more across, are freely borne on strong stems, 12 to 15 in. long. Our mixture contains a wonderful range of colors—yellows, from straw to deep golden yellow; all shades of red; orange; pink; many ringed and tipped with a deeper color. Do best in a shady location and in moderately rich soil. Fine for cutting. Not reliably hardy north of Washington, D. C., except in warm, sheltered locations. Splendid for growing in frames or pots. Set roots, claws downward, 2 in. deep and 4 to 6 in. apart. If grown in pots, plant 6 to 8 roots in a 6-in. pot; cover roots with 1 in. of soil, and allow 2 in. of space between them. Ranunculus roots are small and resemble tiny clumps of dahlias.

3 for 20¢; 12 for 65¢;
100 for \$4.50

In northern states, or in any cold section, we advise waiting until spring to plant Ranunculus and Anemone bulbs outdoors. Both of these classes, however, are suitable for indoor winter culture or growing in frames.

ANEMONE CORONARIA

Neat, compact plants with long, stiff-stemmed, showy flowers in many charming colors, such as blue, rose, scarlet, white, maroon, etc. Bloom in May and June. Plant bulbs 3 in. deep and 6 in. apart in a cool, moist, but well-drained soil. Require winter protection north of Washington, D. C., unless they are planted in a very sheltered location. In northern states, or in any cold section, we do not advise outdoor fall planting; it is better to wait until spring. Fine for pot culture, borders, rock gardens and cutting. 1 ft.

GIANT FRESIAS

One of the most fragrant of our indoor winter flowering plants. Bulbs are rather small; a 6-in. pot or pan will hold about a dozen. Use good fibrous, sandy garden loam. Set bulbs upright, allowing about 2 in. space between them, and barely cover with soil. In flower from January onwards and for best results must be grown in a moderately low temperature. EASTER LILIES

Popular throughout the world, loved and admired by everyone. We offer three varieties that are ideal for indoor growing. Use a 5- or 6-in. pot; place bulb loosely in rich, porous soil so that it is barely covered and the soil gently but firmly set. Keep in a cool, dark but airy place, free from frost, until bulbs are well rooted; afterward bring to the light and grow on in a temperature of not more than 60° F. Ideal garden subjects in frost-free locations. In other sections, they may, after having bloomed in the house, be planted outdoors for flowering during the late summer.

8612 Giant Easter Lily

Lilium longiflorum giganteum

The fragrant, trumpet-shaped flowers are of the purest white and very large. The plant is of sturdy, stocky growth and largely forced for Easter, but is just as valuable for later flowering. Bulbs are usually ready for shipment in late October. The plants have dark green foliage with the stems marked black. Valuable for cutting; good keepers.

60¢ each; 3 for \$1.65; 12 for \$5.75

Bermuda Easter Lily

8602 Large Bulbs: 50¢ each; 3 for \$1.35
8601 Extra Large: 60¢ each; 3 for \$1.65

Bermuda Easter Lily

Lilium harrisii

Quick to come into bloom; may be forced for Christmas, but it is for Easter that it is so extensively planted. The plants grow about 3 ft. tall and produce 5 to 12 or more large, trumpet-shaped, fragrant, waxy white blooms with contrasting yellow anthers. Our bulbs are genuine Bermuda grown and usually reach us in August and are available from then until December, subject to prior sale.

8602 **LARGE BULBS:** Well grown, they produce 5 to 10 large flowers per plant. 50¢ each; 3 for \$1.35; 12 for \$5.00

8601 **EXTRA LARGE BULBS:** Will produce taller plants with more flowers per stem than the large bulbs. 60¢ each; 3 for \$1.65; 12 for \$5.75

8613 Estate Lily
50¢ each; 3 for \$1.35; 12 for \$5.00

8613 Estate Lily

A new lily of recent introduction with very large, pure white, long, trumpet-shaped flowers of such wonderful texture as to be extremely long lasting on the plant or when cut. Plants are strong growing and prolific bloomers, the flowers having a most pleasing fragrance.

While it has been referred to as "the hardy Easter Lily," we suggest planting it outdoors only in temperate climates. Although it has withstood planting in very cold sections with winter protection, we do not consider it reliably hardy when subject to sub-zero temperatures. It is for indoor winter blooming that it is most valuable. Bulbs are usually ready for shipment in late October.

Burpee's LAWN GRASS SEED

The best time to start your lawn, or to repair it, is during the cool weather of early fall. The weather at this time is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses. Why not plan now to have a luxuriant lawn that will add so much to the beauty of your home? For new lawns, sow 1 lb. of grass seed to 200 sq. ft.; 100 to 150 lbs. per acre. To improve old lawns, half these quantities should be sufficient.

Burpee's Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. In frost-free sections, seeds may be sown at almost any time of the year; in mild climates or in localities where winters are not too severe, seeds may be sown in the fall—the earlier the better—so that plants will be of good size before freezing weather sets in. After the ground is frozen hard, cover the bed with a light mulch of straw or strawy manure to prevent the plants from being heaved out by alternate freezings and thaws. Cultural directions are given on the bag containing the seeds. Heights and blooming season are average; they may vary in different localities and under different weather and soil conditions.

Burpee's VEGETABLE ROOTS

Perennial vegetable roots (Asparagus, Rhubarb and Horse-Radish) may be planted in the fall with excellent results. At this time of the year it is usually possible to prepare the soil more easily and the roots are off to an early start the following spring. These roots are ready for shipment about the 15th of October. Mushroom Spawn is always available. All orders filled in rotation as received.

Asparagus

Does well in any well-drained garden soil and for best results should be enriched with manure and fertilizer. In very cold localities, provide protection to fall-planted roots by applying a mulch of strawy manure. 50 roots will plant 65 to 75 ft. of row. Cultural directions are sent with every order of asparagus roots.
